

# GAUTAM BHARDWAJ

Data Analyst | Ad Operations | Product Analytics

New Delhi, India | 8178365520 | gautambhardwaj261203@gmail.com | [LinkedIn](#) | [GitHub](#)

## PROFESSIONAL SUMMARY

Data Analyst who writes SQL (joins, subqueries, aggregations) to answer defined business questions against relational datasets, then verifies results for accuracy before they reach stakeholders. Currently interns at an ad-tech platform, auditing 20-50 partner accounts and translating business rules into platform configuration and reporting logic. Sole point of contact for a live external enterprise account. Detail-oriented and comfortable working independently against pre-defined processes and tight deadlines. MCA candidate (BCA foundation).

## EXPERIENCE

### Data Analyst Intern (Ad Operations) — JustBaat Mediatech (justbaat.ai)

Jun 2026 – Aug 2026

- Automated daily data reporting across 36+ live data sources (ad-tech platform APIs) using Python, cutting manual reporting turnaround by 70%+.
- Own end-to-end data configuration and accuracy for 6+ external partner accounts (Limelight SSP platform: Adzim, Adstork, RTBYield, Auctera, Collectcent, Adcanny) — maintaining business rule sets (traffic quotas, floor pricing, inclusion/exclusion lists) at domain and bundle level.
- Sole point of contact for a live external enterprise account (Collectcent Digital Media): delivered 5 data integrations live same-day and independently run monthly data-quality and configuration review cycles.
- Audited 20-50 supply and demand partner accounts, producing color-coded Excel reports that flagged performance issues before they hit revenue.
- Rebuilt a manual VLOOKUP/SUMPRODUCT banner-inventory lookup in Python, scaling it to 54,000+ rows.
- Built a Python tool to convert SSP/DSP selector JSON files directly into structured Excel reports, removing a manual conversion step from the workflow.
- Sourced and qualified B2B partners across international publishers, DSPs, and OTT platforms (Apollo.io, LinkedIn); built a COUNTIFS-based dashboard tracking leads across 4 pipeline stages.
- Trained a fellow intern end-to-end on the Limelight SSP platform: endpoint creation, live/whitelist/blacklist management, and format-specific setup across CTV, in-app (banner/video), and web (banner/video).
- Built a formula-driven Google Sheets dashboard aggregating outreach data (SUMIF/QUERY) across 4 pipeline tabs (Jungle, OTT, Prebid/Postbid, oRTB) into a single live view of mail sent, follow-ups, and deal status.

## PROJECTS

### Summer Analytics 2026 Capstone — Decarbonizing Travel — Python, LightGBM, Process Mining [\[GitHub\]](#)

- IIT Guwahati x Celonis program: process-mined 65,289 corporate travel trips (178,090 tonnes CO<sub>2</sub>e, \$140.5M spend) to identify emissions hotspots and deliver quantified Net-Zero-2030 policy recommendations.
- Engineered features from trip, event-log, and attribute data; trained a LightGBM classifier (5-fold stratified CV) to predict high-carbon trips pre-booking, achieving ~0.999 ROC-AUC with no label leakage.

### Digital Marketing Analysis — Python, Pandas, SQLite, Matplotlib, Looker Studio [\[GitHub\]](#) [\[Live Dashboard\]](#)

- Analyzed 30,000 rows of multi-platform digital marketing data (Meta, Google Search, TikTok, Snapchat, LinkedIn, Google Display) to compare ROI, CTR, CPM, and funnel conversion.
- Found Google Search generated ~6x more revenue than Meta (\$10.3M vs \$1.6M) and was the only platform with positive ROI (+284%).
- Built a live, filterable Looker Studio dashboard on the cleaned dataset with platform/placement/country/date filters and revenue, CPM, and ROI KPI cards.

### End-to-End E-Commerce Data Analysis (Olist Dataset) — Python, SQLite, Pandas, Seaborn [\[GitHub\]](#)

- Wrote SQL queries (multi-table joins across orders, customers, products, sellers, and payments; subqueries; GROUP BY aggregations) against the Olist Brazilian e-commerce dataset (100K+ orders) to answer 9 defined business questions on revenue trends, product categories, payment methods, and top sellers.

### Global Cricket Analytics Dashboard — Excel / WPS [\[GitHub\]](#)

- Cleaned and modeled international cricket match data (2014–2026); built an interactive dashboard with pivot tables, slicers, and KPIs on team performance, venues, and season trends.

## TECHNICAL SKILLS

SQL: Joins, Subqueries, Aggregations (GROUP BY/ORDER BY), Query Writing Against Relational Data

Languages & Libraries: Python (Pandas, NumPy)

Data Analysis & ML: Statistical Analysis, Feature Engineering, LightGBM, Cross-Validation, Process Mining

Visualization & Reporting: Excel (VLOOKUP, SUMPRODUCT, Pivot Tables), Google Sheets, Looker Studio, Matplotlib, Seaborn

AdTech / Programmatic: Limelight SSP, Endpoint & QPS Management, Bid Floors, SSP/DSP Operations

Databases: SQLite

Tools: Git, GitHub, VS Code, Jupyter Notebook

## CERTIFICATIONS

- AI Appreciate Badge — CBSE and Intel (2026) [\[Show credential\]](#)
- Academic Process Mining Fundamentals — Celonis (2026) [\[Show credential\]](#)
- Introduction to Data Analysis Using Microsoft Excel — Coursera (2025) [\[Show credential\]](#)
- Summer Analytics 2026 (Data Science & Machine Learning) — IIT Guwahati (Expected Aug 2026)

## EDUCATION

Master of Computer Applications (MCA) — Jagannath University, Jagannath Community College, Rohini, Delhi (2025 – Present)

Bachelor of Computer Applications (BCA) — College of Architecture and Design, MDU (2022 – 2025)
